EDUCATION

Virginia Tech

B.S. in Computational Modeling & Data Analytics, Minor in Computer Science

Blacksburg, VA

Aug. 2021 – May 2025

EXPERIENCE

Capital One

Aug 2025 – Present

Software Engineer – Enterprise Platforms Tech, Artifactory Subteam

Dallas, TX

- Engineer on the **JFrog Artifactory** platform backing CI/CD and artifact distribution for **600+ applications** bank-wide; on 24/7 on-call rotation for incidents that, when they hit, block builds and prevent ASG scale-ups org-wide.
- Contributed to a teamwide migration of Artifactory from a **shared AWS account** to a **standalone account**: migrated production **Lambdas**, moved all **metadata**, transferred half of the artifact data, and configured **federation sync** between source and target instances to keep them consistent during cutover.
- Held on-call during a bank-wide **Artifactory authentication rollout** requiring **20K+ developers** to run a migration script with a **~50% initial success rate**; triaged blocked builds and CI failures across teams until rollout stabilized.

kmj.partners

2024 – 2025

Technical Co-Founder / CTO

Remote, USA

- Built a conversational outreach platform for creator clients on a profit-share model: Python / FastAPI, Postgres, deployed on **Railway**; delivered **~500K personalized touchpoints**, with top-creator campaigns peaking at **14% conversion** in best months.
- Self-hosted quantized LLM inference via **Ollama** (Q4 GGUF) on rented **RTX 4090s on RunPod**, sustaining **50 tok/s** per worker on **open-weights Mistral merges** chosen over instruction-tuned baselines for stronger persona consistency.
- Shipped a remote iPhone control service over LTE using **Appium** and **XCUITest** driven through a **WireGuard** mesh, with **VNC** fallback for human handoff.
- Owned full SDLC (CI/CD, infra, on-call); hired and managed remote engineers from **Eastern Europe** and **Latin America**; drove **\$600K** in agency revenue across an 8-person team.

Capital One

June 2024 – Aug 2024

Software Engineer Intern – Card Tech, Omnius Platform Team

McLean, VA

- Built an internal self-service case management dashboard (**TypeScript**, **Vue.js**, **Pinia**) that let non-technical operations teams modify **case workflow definitions** stored as configuration in a **Git repo** – providing a UI for structural changes that previously required an engineer to commit and merge.
- Integrated with internal platform APIs and **CI/CD pipelines** to safely apply ops users' workflow changes; managed shared state with Pinia to eliminate cross-view desync.

PROJECTS

in10nt.ai | *Next.js, TypeScript, Firebase, AWS, Firecracker microVM, Docker, WebSockets*

- Built a platform for creating persistent AI agents with **Firecracker-microVM** sandboxes for DevOps automation; architected to scale to thousands of concurrent agents; reached **4 design partners** through 3 MVP iterations.
- Conducted **20+ user interviews**, made roadmap calls from direct partner feedback, and wrote specs to align collaborators.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, Go, Swift, SQL

Frameworks: React, Next.js, Vue, Node.js, FastAPI, Flask

Data & Infrastructure: AWS, GCP, Kubernetes, Docker, Kafka, MongoDB, Postgres, Firebase, JFrog Artifactory

Certifications: AWS Certified Developer – Associate
