Education

Virginia Tech — Blacksburg, VA
B.S. in Computational Modeling & Data Analytics, Minor in Computer Science — *Aug. 2021 – May 2025*

Experience

Capital One — Aug 2025 – Present
Software Engineer – Payments (prev. Enterprise Platforms, Artifactory) — *Dallas, TX*

- Engineer on the Payments team: own auto-loan debit and ACH transaction processing moving $1B/week.
- Building a regulated mail-payments agent that automates back-office processing of mailed check payments – Snowflake, Kafka, Agent SDK.
- Previously on the JFrog Artifactory platform backing CI/CD and artifact distribution for 600+ applications bank-wide; on 24/7 on-call rotation for incidents that, when they hit, block builds and prevent ASG scale-ups org-wide.
- Contributed to a teamwide migration of Artifactory from a shared AWS account to a standalone account: migrated production Lambdas, moved all metadata, transferred half of the artifact data, and configured federation sync between source and target instances to keep them consistent during cutover.

kmj.partners — Aug 2024 – Aug 2025
Technical Co-Founder / CTO — *Remote, USA*

- Built a conversational outreach platform that captured every customer interaction: Python / FastAPI, Postgres, deployed on Railway; delivered ~500K personalized touchpoints, with top campaigns peaking at 14% conversion – instrumented end-to-end to learn what actually converted.
- Self-hosted quantized LLM inference via Ollama (Q4 GGUF) on rented RTX 4090s on RunPod, sustaining 50 tok/s per worker on open-weights Mistral merges chosen over instruction-tuned baselines for stronger persona consistency.
- Co-founded and ran an 8-person agency to $600K in revenue on a profit-share model; owned full SDLC (CI/CD, infra) and hired and managed remote engineers from Eastern Europe and Latin America.
- Shipped a remote iPhone control service over LTE using Appium and XCUITest driven through a WireGuard mesh, with VNC fallback for human handoff.

Capital One — June 2024 – Aug 2024
Software Engineer Intern – Card Tech, Omnius Platform Team — *McLean, VA*

- Built an internal self-service case management dashboard (TypeScript, Vue.js, Pinia) that let non-technical operations teams modify case workflow definitions stored as configuration in a Git repo – providing a UI for structural changes that previously required an engineer to commit and merge.
- Integrated with internal platform APIs and CI/CD pipelines to safely apply ops users' workflow changes; managed shared state with Pinia to eliminate cross-view desync.

Projects

in10nt.ai | *Next.js, TypeScript, Firebase, AWS, Firecracker microVM, Docker, WebSockets*

- Built a full-stack platform (Next.js, TypeScript) for persistent LLM agents running in Firecracker-microVM sandboxes for DevOps automation – WebSocket orchestration, webhook integrations, async architecture sized for thousands of concurrent agents; reached 4 design partners through 3 MVP iterations.
- Ran 20+ discovery interviews with design partners and translated operator feedback directly into roadmap and agent-capability decisions – owned each feature from customer problem to production.

Technical Skills

Languages: Python, Java, TypeScript/JavaScript, Go, SQL, Swift
Frameworks: React, Next.js, Node.js, GraphQL, FastAPI, Vue, Flask
Data & Infrastructure: AWS, Kafka, Postgres, Snowflake, Docker, Kubernetes, GCP, Firebase, MongoDB
Certifications: AWS Certified Developer – Associate
